

# Agile Thinking for Managers

It's time to hack your mind

## Challenge Assumptions

It's hard to be an agile thinker when you think you know everything already. This workshop challenges assumptions and breaks attendees out of their mental traps.

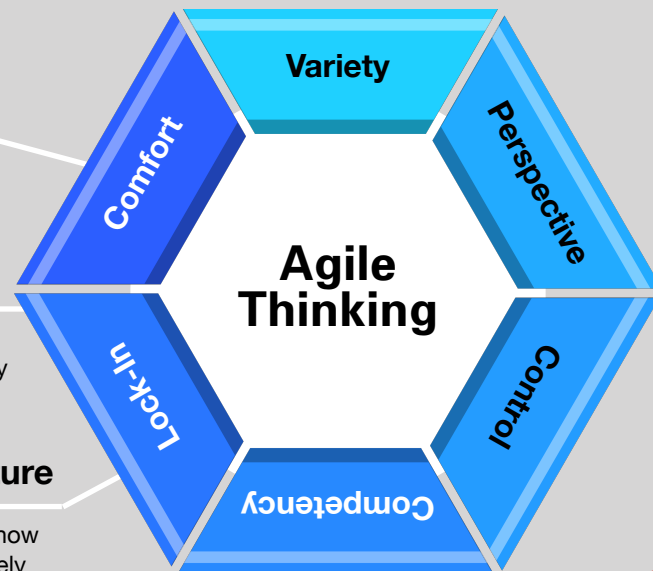

## Embrace Uncertainty

We don't just treat uncertainty as an abstract, we put a name on it and confront it. Uncertainty becomes a tool not a threat.

## Learn to Navigate the Future

Once attendees recognize they can't know everything, we teach them how to loosely couple longer term plans so they can be more anticipatory and reactive to change.

Our half-day and full-day workshops engage leaders in an exploration of how mental models constrain creativity. Attendees apply scenario-based futures to real work so they can immediately see how ideas in which they are confident and certain erupt into volatility under different social, economic, political, and technological circumstances.

## The Agenda

- Why you cling to certainty
- Confronting your assumptions
- Putting a name on uncertainty
- Introduction to scenario planning
- Hacking your mind
- Planning vs. navigating
- Embracing uncertainty
